NuCharge It™ Electrostatic Coatings

Topkote's NuCharge It™ High-Performance is designed to be incredibly tough and flexible, providing exceptional protection against chemicals and abrasions. Our coatings boast excellent color retention and, with a specialized additive, offer graffiti resistance. Once fully cured, our epoxy and urethane finishes deliver a durability that rivals baked-on factory coatings.

The most popular applications for these products are specialized areas such as:

- Office Furniture
- Ornamental Iron
- Grocery Store Cases
- School Lockers
- Storefronts/Doors
- Railings/Balconies
- Stairwells
- Light Poles
- Industrial Machinery
- Bathroom Partitions
- Elevator doors/Frames
- Outdoor Furniture
- Medical/Dental Equipment

Low VOC Electrostatic Epoxy

The same great features of our traditional Electrostatic Epoxy but with higher solids and lower VOC that is **less than 2.8 lbs. per gallon**. Available in high gloss, semi-gloss, and satin finishes. For interior use only.

NuCharge-A-Thane II

For exterior use primarily. A high performance two-component Acrylic Urethane that combines superb corrosion and chemical resistance with exceptional gloss retention and weather ability. Available in high and semi gloss finishes. **Less than 2.8 lbs per gallon.**

Electrostatic Low VOC Enamel

For interior and exterior use. A single component modified acrylic enamel that has a VOC of less than **2.8 lbs. per gallon**. Recommended for **all metal surfaces (especially school Lockers)**, which have been previously coated with unknown finishes that may be susceptible to lifting by stronger solvents as used in urethanes and epoxies.

The Most Effective Way to Improve Appearance and Keep Cost in Line is to refinish what you currently have instead of replacing it. In many instances, a new atmosphere can be created overnight. Protect your investments and your reputation by demanding quality finishes that are attractive and durable.
